

Dear Colleagues

It is a great pleasure for the editorial staff to present *Norsk Geologisk Tidsskrift* in a larger format with a new design and lay-out, a result achieved with the good cooperation of Universitetsforlaget's journals division. The type page area is 175 × 245 mm, with two columns (of 85 mm) for articles and three columns (of 55 mm) for notes. This should make it possible to publish larger figures that require high resolution, e.g. detailed maps and seismic profiles.

The most noticeable improvement is the photograph on the front and back cover pages. It shows a section of

Ordovician limestones from Hovedøya, an island near the harbour in Oslo, and was photographed by one of our members. It is our intention to change the picture every year. We hereby invite our readers/subscribers/members to submit pictures (as slides/diapositives) by September 15th each year for use as a cover photograph the following year. We hope you approve of the new product!

Ola M. Sæther
Editor
