

# Editor's note

The 1998 volume of the journal covered a broad range of topics, ranging from metamorphic petrology and diagenesis to structural geology, palaeontology and Quaternary geology. There was also a good supply of new manuscripts, and the journal has proven attractive for contributions in both onshore and offshore geology. Although geological models may change, the journal's tradition of documenting geological data and observations is valuable for future researchers, and we will continue this tradition into the next century. A possible challenge for the near future may be to increase the proportion of papers dealing with quantification of geological processes. We also welcome discussions and short notes of general interest to the reader. Finally, we invite our readers to make suggestions for good cover photos.

From 1999, the journal will also be electronically

available to subscribers at no additional charge. The online journal can be accessed via the Ingenta Journals service at [www.ingenta.com](http://www.ingenta.com). Later in the year subscribers will also be offered access via Swetsnet, Dawson Information Quest, EBSCO Online, and Blackwell Electronic Journal Navigator. Please visit the Scandinavian University Press's home page at [www.scup.no/online](http://www.scup.no/online) for the latest information on how to access the journal online.

Reidulf Bøe is thanked for his great contribution as Editor during the last two years, and Lars Olsen is welcomed as a co-editor along with Øystein Nordgulen. Special thanks are extended to the referees for their detailed and comprehensive work.

MAI BRITT E. MØRK

*The following persons contributed as referees in 1998:*

Aa, A. R.	Krill, A. G.
Aarseth, I.	Kullerud, K.
